

# STUDENT REPORT

## DETAILS

### Name

KC Shreya

### Roll Number

3BR23EE038

## EXPERIMENT

### Title

### SPECIAL STRING

### Description

Alice has a string A consisting of lowercase English letters. Her friend gives her another string S and asks her to modify string A and replace its characters with the characters present in string S.

But, to achieve the above task, Alice must follow the below steps:

1. Choose a character from string S that has the minimum ASCII distance from the  $i$ th character in string A

Replace the  $i$ th character in string A with the chosen character in string S

Your task is to find and return an integer value, representing minimum total ASCII distance that is required to modify string A to the characters in string S. Return 0, if all the characters in string S are already present in string A

### Sample Input:

abcd

xyz

### Sample Output:

86

### Source Code:

```
a=input()
s=input()
total=0
for i in a:
    if i not in s:
        distance=9999
        for j in s:
            temp=abs(ord(i)-ord(j))
            if temp < distance:
                distance=temp
        total+=distance
print(total)
```
